Anchor position (Morton-sorted)
Hash-grid encoding + LevelSEGate
h
AnchorCondNorm (FiLM: scale, then offset)
decoded scale, offset (condition stage 2)
h′
causal_knn (causal KNN + fusion)
h″
mlp_grid (stage 2)
feat: mean, scale, prob
mlp_grid (stage 1) scale, offset distributions
Arithmetic coding: scaling + offsets
Arithmetic coding: feat
RENO (learned point-cloud codec)
Anchor position bitstream
Quantized in this study (mlp_grid, mlp_deform, causal_knn)
Kept at FP32 (AnchorCondNorm, LevelSEGate, hash-grid, outputs)
RENO (anchor-position codec; separate ablation)
